

SPINE v2.0.6: DISPOSITION OF GPT'S SECOND ATTACK • 2026-09-13

GPT attacked spine v2.0.6 (episode-1-spine-four-keys-v2.0-attack-chatgpt-r2-2026-09-13.md): REWORK, high confidence, driver again the room's closed pool. This disposition separates what is still a row from what has become a disagreement between the two adversaries about character plausibility, which no further round can settle and only readers can. Stephen rules.

Where the two adversaries now stand

Question	Fable (four rounds)	GPT (two rounds)
Does the device hold?	Yes, every round	Never attacked it
Do the foundations and the police rulings hold?	Yes, explicitly in round 4	Foundation 3 (Violet will not watch) rejected twice as "not believable in the woman"
Is the room's inward turn competent?	"Honest, and still wrong about who, which is the story"	Not competent: told is not could-know; a latched gate is not a wall
Is Brad's box lie believable?	A costed mistake, owned	Author-manufactured
Margo's lock	A reading she keeps ten days; paid	She can state a tampering hypothesis on Day 50; her refusal must be hers, and credible

Two of GPT's three fatals are the same objection to a ruled character choice: that a methodical woman who changes her lock and lodges keys would also put a camera on the pot, and that four frightened adults would not close a pool on a sentence and a yard. Fable read the same rows and called both honest and paid. That is no longer a machinery question. It is the question the whole premise asks a reader to accept: that competent people refuse to know, and convict a friend on a fear. It has been the premise since v0.3. It is what the Part H cold read and the three readers exist to test.

The table

#	Finding	GPT	Reading	Answer	Kind
1	The pool. A latched gate is not a wall; someone could follow her in, watch her at the open gate, search under an obvious step. "Every route runs through the five" is inference, not fact.	Fatal	Correct as logic; the spine overclaimed. The room cannot prove a negative, and the Day 15 row said "every route runs through the five" as if it could.	Re-word Day 15 to what is true: the room cannot exclude a stranger who climbed a wall or followed her through a gate, and knows it, and chooses the reading anyway, for the reasons frightened people choose: her sentence in her hand, her death, the letter's list, and nobody in her life to look at. Write it as the room's choice, not its proof, and pay it: the later chapters indict exactly this. This is the jeopardy ruling (danger misdirected) made explicit in the row.	Row: honesty about a choice

#	Finding	GPT	Reading	Answer	Kind
2	Violet does not put a camera on the empty pot , which would catch Brad on Day –9. Her refusal to know is not believable in a woman this methodical.	Fatal	A disagreement about her, not a hole. Foundation 3 rules she will not watch, and says why: watching tells her which, and she would rather be wrong about her own mind than right about a friend. Every other act of hers (the lock, the keys, the solicitor, the store) is consistent with that: each protects without answering. A camera answers. Fable, given the same rows, found the refusal honest and paid.	No row can settle this; a reader can. The spine already carries the refusal four times. Add one sentence in C1 that names the distinction GPT misses: every measure she takes protects without telling her which; the camera is the only one that tells her, and it is the only one she refuses. Then test with readers.	Ruled; reader test
3	Brad's box lie is author-manufactured: his prepared truth answered any question.	Fatal	Partly. It is a costed authorial choice and the spine owns it. What it lacks is the trait that makes the mistake his.	The trait exists in canon and is not in the row: Brad was the pet of the room for seven years, the one who agreed with whoever spoke last, whose thank-you cost him something, who moved his keys twice on the table. Mirroring under pressure is his habit, known to all four (Ruby lists it in chapter 2). Write it in C2 and D3 as the compulsion GPT asks for, and let Ruby's chapter 2 list carry it so the listener has it before chapter 7 needs it.	Row
4	Margo on Day 50 can state a tampering hypothesis to Del ; R27 then licenses a canvass; the boat owner names Brad while he is alive.	Serious	Correct, and it is the spine's oldest truth. v1.4's C5 said exactly this: from Day 14 Margo could start a chain that names Brad within a fortnight, and does not, and that refusal is the load-bearing lock, hers, paid on Day 60 and Day 214. v2.0.6's C5 softened it to "the allegation is murder, on a reading", which reads as if she could not; she could.	Restore v1.4's honesty in C5 Week 8: the route is open and computed (Del takes the hypothesis; R27 canvass; the boat owner names Brad by about Day 55; Brad is interviewed and says he went to his own locker and looked; not an offence; he goes that week). She does not take it, for reasons that are hers: to state the hypothesis is to name the youngest of them as a forger and therefore as her friend's killer, on a reading; she has been wrong about people before; and the man it points at is the one arguing for the man the room has chosen. Named, hers, paid. The same sentence v1.4 ended on: if a reader does not believe Margo would keep this for ten days, the episode fails here and nowhere else.	Row: restore the honest lock
5	Chapter 7 overstates: "every morning of his life"; the item's presence in the box before seven cannot be sourced.	Serious	Correct on the wording.	Ally's claim reduced to what she has: he said it had not been in his box that morning and must have come in an afternoon sort; the counter says there has never been an afternoon sort; so either the one sort missed his box that one day, or he had it at seven and said he had not. Said as the question it is, in a chapter the spine already calls a suspect turn. "Every morning of his life" becomes "every working morning, by both survivors' account".	Wording
6	The whole: the camera on Day –29 ends it.	Fatal	Row 2 again.	As row 2.	Ruled; reader test

My reading, for Stephen's ruling

Two rounds of GPT and four of Fable have converged on the same three joints, and on two of them the adversaries now disagree about people, not mechanics: whether Violet would refuse to watch, and whether the room would turn inward on a sentence. Both are your rulings (foundation 3; the jeopardy position) and both were made knowing the cost. A further adversary round will return the same two objections in the same words. The remaining machinery items are rows and wordings, and they are answered above.

The honest next test is not another adversary. It is the one the kill-gates already name: the Part H brief read cold to three to five of the twelve testers, and the two letters, once written, put in front of the three readers with one question: do you believe she would not look, and do you believe they would turn on Liam.

Recommendation

Apply rows 1, 3, 4 and 5 as v2.0.7. Rule v2.0.7 the spine of the episode, superseding v8.1, with the two character locks explicitly flagged as the things the reader tests must pass. Stop the adversary loop.
