

PROMPT: ChatGPT attacks the spine, round three (v1.3)

Attach three files: *episode-1-spine-four-keys-v1.3.pdf*, *four-keys-spine-attack-chatgpt-2026-08-30.pdf* (round one, with disposition) and *four-keys-spine-attack-chatgpt-round2-2026-08-30.pdf* (round two, with disposition). Nothing else. Paste the block below.

You are the adversarial auditor for a true-crime narrative. Attached are the spine of an episode at v1.3 and your own two previous audits, each with a status table showing how every finding was disposed. Twenty findings so far: sixteen accepted and repaired, two answered from the ledger, one closed by a new world rule (R27), one settled at the premise. Do not re-litigate a disposed finding unless its repair opened a new hole; if so, cite the round and number and the new row.

The world's rules are R19 to R27 in Part E. Treat them as given. Attack the graph.

Rules of the audit, unchanged. Every finding names a row, a day, and a person. A finding that says "someone would" must say who, what they lawfully hold on that day, whom they take it to, and what that recipient's first mandatory action is. Rank by confidence. For each, state what would have to be true for the finding to be wrong. Return REWORK, KILL or PASS. This is the last round before prose: if you return PASS, say what you would still watch; if you return REWORK, rank only what would change a reader's belief, not what would tidy a row.

Attack in this order.

- 1. The seven-day shift (A3 Days 47 to 61, B3 row 34, B4, C2 week 8, C5 week 8, C9).** Margo's turn now falls on Day 51, after both loading-bay tapes have expired under R7 on Days 47 and 49. Is that the world's order or the plot's? Test it against the pace of the room: five weekly meetings before the money is re-read beside the board. Then find any other route from Day 19 to Day 49 by which a person who lawfully holds the letters could cause the tape to be preserved: Ruby's Day 27 route under R22, the sister, the market manager, the coroner's officer, Del on her own initiative when a letter reaches her.
- 2. The rucksack (A2 Day 0, B2 row 18, B7 R15 and R16, C7 Day 1, C8).** No. 14 now sees a man's back and nothing in his hands. The hook photograph is read as consistent with the survivors' account. Break it: what does the Day 222 review do with an unidentified man in the lane at 22:30, four friends who all said no on Day 2, a key-holder among them, and a dead man's Day 2 denial? Name the detective's first mandatory action and whether it reaches the market.
- 3. The card in the drawer (A4 Day 215, B5 row 49, C6).** Margo left an "in case" card naming Tessa. Test the woman in the five against it: eleven years of compartments, ten minutes early to everything, sums at three in the morning. Then test what else a competent officer finds in that kitchen on a welfare visit, and whether any of it reaches the app, the stranger, or the letters before Day 219.
- 4. The skipper's first name (B1 rows 10a and 10c, B7 R6a, C8, A5 Days 311 to 333).** He held "Brad the signwriter, the one with the van" for three years and was never asked. On Day 311 he writes to Ally; on Day 312 Del revives the file and runs the name. State Del's first mandatory action on learning that a man presumed drowned at Kestrel Head had, three years earlier, been the last drinking companion of another man who vanished without trace, and whether anything in R19 to R26

lets that reach Brad before Day 333. Then the reverse: does the revived file, with its dead man's name, reach the other force's systems before the landlady writes, and what would a hit look like?

5. **The identity with no face (B1 rows 10, 10d, 10e; A1 Days -900 to -500; C2).** Eight months, then fourteen, under a name with no photograph attached to it anywhere: cash rent, cash workshop, a prepaid, trains bought at the window. Name the first ordinary demand for photo identification in a coastal town of forty thousand that a man in his thirties cannot decline without being remembered, and say on what day it falls.
6. **The two thin locks, one more time (C4 from Day 27, C5 Days 51 to 60).** Both are character-supplied refusals: Ruby will not break a dead woman's instruction for a note on a closed file; Margo will not accuse a friend on sums. State, for each, the day on which the world's facts change enough that the refusal stops being hers and starts being the plot's. If that day precedes the planned turn, that is the finding.
7. **The whole graph, cold.** Read Part B as if for the first time and list every person who can lawfully know two facts that, combined, name Brad as alive or as the forger before Day 326. For each, the earliest day they could hold both.

Do not propose prose. Do not propose a new premise. Do not say "the police would investigate" without naming the officer's first mandatory action and its date.
