

Studio Background Machine Swap — 3 self-contained edit prompts (2026-08-12)

The Tip Line answering machine is now a canon character (approved 2026-08-11). The three studio backgrounds still show the old silver-cream cassette deck on the desk — a continuity mismatch against the dialogue portrait. Each section below is fully self-contained: the exact file to edit, the references to attach, and the complete prompt to paste.

Attach with every generation (both):

1. The background image being edited (path given per section).
2. The approved machine portrait as the object reference: `C:\Users\User\OneDrive\Documents\AllyQuinn Game\Images\Production 2026 Images\Special Items\Answering machine 3.png`

Delivery: full image, same resolution as the source file (1284×2778 preferred). If the tool repaints anything outside the machine, deliver anyway — the machine region gets patch-composited onto the original here, so the rest of the frame stays pixel-identical. GUIDs are kept; import is a pixel swap.

1 • bg_e1_studio.png — warm lamp scene (the tip-line stage)

File to edit: `C:\users\user\dev\aq30-unity\Assets\Art\UI\Backgrounds\bg_e1_studio.png`

Edit this image. Change ONE object only: the light silver-cream cassette recorder lying on the right side of the desk, in front of the monitor and to the right of the mixing console. Replace it with the machine from the second attached reference image: Ally's tip-line answering machine. It is a chunky early-1990s desktop answering machine in warm dark graphite-grey plastic with worn, thumb-polished edges; a horizontal speaker grille of thin slots on its upper face; a round red MESSAGE light in its top corner, glowing softly; a small strip of aged masking tape with illegible handwritten scrawl; a small mechanical tape counter; a smoky cassette window with a warm amber-orange cassette visible inside; and a row of chunky piano-key buttons along its front edge, one key (with a small embossed play triangle) pressed down. A coiled telephone cord runs from its side and disappears behind the desk.

Keep the new machine in exactly the same position, at the same scale, and under the same perspective as the object it replaces: resting flat on the desk, seen from slightly above, keys facing the chair. Match this scene's lighting and colour temperature exactly, including the correct cast shadow on the desk and any reflection in the desk surface. The red message light may throw a very faint red glow onto the desk beside it.

Scene lighting: warm amber desk-lamp key from the left; the machine's left face catches warm light, its right face falls into shadow.

Do not change anything else: the desk, drawers, lamp, microphone, mixing console, monitor and waveform, corkboard, shelves, window, floor, and all lighting stay pixel-identical. Same image size and framing.

2 · bg_e1_studio_dawn.png — red on-air strip, dusk window

File to edit: C:\users\user\dev\aq30-unity\Assets\Art\UI\Backgrounds\bg_e1_studio_dawn.png

Edit this image. Change ONE object only: the light silver-cream cassette recorder lying on the right side of the desk, in front of the monitor and to the right of the mixing console. Replace it with the machine from the second attached reference image: Ally's tip-line answering machine. It is a chunky early-1990s desktop answering machine in warm dark graphite-grey plastic with worn, thumb-polished edges; a horizontal speaker grille of thin slots on its upper face; a round red MESSAGE light in its top corner, glowing softly; a small strip of aged masking tape with illegible handwritten scrawl; a small mechanical tape counter; a smoky cassette window with a warm amber-orange cassette visible inside; and a row of chunky piano-key buttons along its front edge, one key (with a small embossed play triangle) pressed down. A coiled telephone cord runs from its side and disappears behind the desk.

Keep the new machine in exactly the same position, at the same scale, and under the same perspective as the object it replaces: resting flat on the desk, seen from slightly above, keys facing the chair. Match this scene's lighting and colour temperature exactly, including the correct cast shadow on the desk and any reflection in the desk surface. The red message light may throw a very faint red glow onto the desk beside it.

Scene lighting: dim dusk with a red on-air strip glowing on the wall; cool ambient light with a faint red rim on the machine's upper edges.

Do not change anything else: the desk, drawers, lamp, microphone, mixing console, monitor and waveform, corkboard, shelves, window, floor, and all lighting stay pixel-identical. Same image size and framing.

3 • bg_e1_studio_onair.png — deep night, rain

File to edit: C:\users\user\dev\aq30-unity\Assets\Art\UI\Backgrounds\bg_e1_studio_onair.png

Edit this image. Change ONE object only: the light silver-cream cassette recorder lying on the right side of the desk, in front of the monitor and to the right of the mixing console. Replace it with the machine from the second attached reference image: Ally's tip-line answering machine. It is a chunky early-1990s desktop answering machine in warm dark graphite-grey plastic with worn, thumb-polished edges; a horizontal speaker grille of thin slots on its upper face; a round red MESSAGE light in its top corner, glowing softly; a small strip of aged masking tape with illegible handwritten scrawl; a small mechanical tape counter; a smoky cassette window with a warm amber-orange cassette visible inside; and a row of chunky piano-key buttons along its front edge, one key (with a small embossed play triangle) pressed down. A coiled telephone cord runs from its side and disappears behind the desk.

Keep the new machine in exactly the same position, at the same scale, and under the same perspective as the object it replaces: resting flat on the desk, seen from slightly above, keys facing the chair. Match this scene's lighting and colour temperature exactly, including the correct cast shadow on the desk and any reflection in the desk surface. The red message light may throw a very faint red glow onto the desk beside it.

Scene lighting: deep cold blue night with rain outside the window; the machine reads as a near-silhouette with cool blue highlights along its top edges, and the red message light and amber cassette window are the only warm accents on it.

Do not change anything else: the desk, drawers, lamp, microphone, mixing console, monitor and waveform, corkboard, shelves, window, floor, and all lighting stay pixel-identical. Same image size and framing.

Not being modified (deliberate)

- **The 15-second FTUE promo film** shows the studio but is baked video — a background prop in a 15s clip is not worth a re-render; revisit only if the film is ever regenerated.
- **ProductionImages/** studio sources are OneDrive delivery snapshots, not game-facing — they stay as history.
